COURSE OUTLINE

SCHOOL School of Engineering ACADEMIC UNIT Informatics and Computer Engineering LEVEL OF STUDIES Undergraduate				
ACADEMIC UNIT Informatics and Computer Engineering LEVEL OF STUDIES Undergraduate				
LEVEL OF STUDIES Undergraduate	Informatics and Computer Engineering			
	Undergraduate			
COURSE CODE SEMESTER 8 th				
COURSE TITLE Cloud Computing and Services				
INDEPENDENT TEACHING ACTIVITIES				
if credits are awarded for separate components of the course, WEEKLY				
e.g. lectures, laboratory exercises, etc. If the credits are TEACHING CR	EDITS			
awarded for the whole of the course, give the weekly teaching HOURS				
hours and the total credits				
4	5			
Add rows if necessary. The organisation of teaching and the				
teaching methods used are described in detail at (d).				
COURSE TYPE Specialised general knowledge, skills development				
general background,				
special background, specialised				
general knowledge, skills				
DEEDEOUISITE COUDSES: Operating Systems I & II. Distributed Systems				
I ANCHACE OF INSTRUCTION Greek				
and EXAMINATIONS:				
IS THE COURSE OFFERED TO				
ERASMUS STUDENTS				
COURSE WEBSITE (URL) https://eclass.uniwa.gr/courses/ICE326/				
(2) LEARNING OUTCOMES				
Learning outcomes				
The course learning outcomes, specific knowledge, skills and competences of an approp	riate			
level, which the students will acquire with the successful completion of the course are d	escribed.			
Consult Appendix A	to the			
Description of the level of learning outcomes for each qualifications cycle, according to the Ouglifications Framework of the European Uicher Education Area				
Descriptors for Levels 6, 7 & 9 of the European Qualifications Framework for Lifelong				
Learning and Annendix B	'B			
Guidelines for writing Learning Outcomes				
The course aims to present and argue on: the basic concepts and important capabilities	of cloud			
computing, the understanding of support technologies and required infrastructures, the	analysis			
of individual systems and techniques, the deepening of application planning and develo	pment			
technologies, the demonstration of the most important services offered, and in applying	all of the			
above to areas of real-world problems and further research.				
Upon successful completion of this course each student will be able to:				
Realize the cloud computing paradigm basic characteristics and capabilities, the				
technologies on which the Clouds rely on, which are the delivery and service models, etc.				
• Understand and comprehend topics on virtualization and virtual machines (VMs), how				
the VMs communicate with the operating systems (OS), how cloud computing utilizes				
VMs, how VNs integrate into clusters and datacenters				
 Investigate and apply modern techniques and methodologies for analyzing and designing 				
cloud-based systems and infrastructures				
 Deepen in cloud-based applications architecture, systems, and service provisioning, as well as in the Cloud mechanisme regarding its distributed menagement load belowing. 				
weil as in the Cloud mechanisms regarding its distributed management, load balancing,				
 Understand and comprehend about middleware (development platforms (cloud) 				
 onderstand and comprehend about initialeware/development pidtion ins (cloud nlatforms and OS) and they are utilized to construct fine-grained solutions on the 	e Cloud			
Fixed uses and design fine grained solutions on integrating a business computing and				
 Evaluate and design nne-granned solutions on integrating a pusiness computing and application infrastructure on the Cloud 				
 Utilize offered programming techniques, libraries, interfaces and toolkits to develop 				

applications/services and scientific calculations on the Cloud						
Scrutinize and to utilize cloud-based applications and services which are offered by						
	various vendors					
	Analyze advance concepts of cloud cor	nputing, such as: capacity planning, workloads				
	distribution, resource provisioning, load balancing, elasticity, high availability,					
Co	cloudonomics, etc.					
General Competences						
these appear in the Diploma Supplement and appear below) at which of the following does the						
COL	irse aim?	appear below), at which of the following does the				
Sea	arch for, analysis and synthesis of data	Project planning and management				
an	l information, with the use of the	Respect for difference and multiculturalism				
nee	cessary technology	Respect for the natural environment				
Ad	apting to new situations	Showing social, professional and ethical				
De	cision-making	responsibility and sensitivity to gender issues				
Wo	orking independently	Criticism and self-criticism				
Tea	am work	Production of free, creative and inductive thinking				
Wo	orking in an international environment					
Wo	orking in an interdisciplinary	Others				
en	vironment					
Pro	oduction of new research ideas					
•	• Search for, analysis and synthesis of data and information, using the necessary technologies					
•						
	Leamwork					
	Adapting to new situations	ant				
	Working in an interdisciplinary environm	lent				
	Advance of free greative and inductive th	inking				
(3)	SVI I ARIIS	iiikiiig				
(5) STELADUS						
1	canabilities of developers and end-users. The NIST model. The cloud cube model. Delivery					
	and Service models. Concepts of JaaS. PaaS and SaaS. Concepts of private, public, community					
	και hybrid Clouds.					
B.	B. Virtual Machines – Clusters – Data Centers: The virtualization and virtual machines concepts					
	(virtual machines – virtualization, virtualization types, the hypervisor concept, containers,					
	(virtual machines – virtualization, virtuali	ization types, the hypervisor concept, containers,				
	etc.), how are they utilized and what is the	ization types, the hypervisor concept, containers, eir importance when developing applications on
